Examiner's Amendment

An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the Issue Fee.

Claims 15-32 and 47-64 are canceled as being drawn to a non-elected invention.

Reasons For Allowance

The present invention is a gas turbine method and apparatus that detects surge, detects stall, and operates stall recovery means. Surge and stall are known phenomena associate with gas turbine engines, and prior art control systems responsive to these parameters are conventional as shown, for example, by the various references cited on the attached Form PTO-892. Neither these nor the other references of record, however, disclose or fairly suggest the claimed combination of features, which include detecting both surge and stall, supplying both surge and stall detection signals to a stall recovery means, and using the stall recovery means for controlling combustor operating means so as to effect recovery from stall. It is pointed out that surge and stall are

related conditions and the two terms are sometimes used interchangeably. In this instance, however, these terms are being used to represent distinct conditions (see page I of present specification). Moreover, the use of both of these conditions in the manner specified by the claims and discussed above is not found in any of the references, and the claims are therefore considered patentable over the prior art.
